# Tranzsol

## Why do you use Tranzsol?

“ We had a history of bad metabolic issues. Tranzsol is very simple to use; just mix it straight into trailers. There is no dusting, so it's faster. It is a simple system to transition our springers. It sets the cows up for a very productive season right from the start.

### ✓ Results

Cows calved down, ready to milk. 95% cycled in the first three weeks of mating. We did 2 kg milk solids straight away. No metabolic issues and no worry if they got magnesium that day. There was also no milk fever during calving.
